

Advancing clean trucks

An opportunity to accelerate the transition to electric vehicles

the Advanced Clean Trucks (ACT) rule requiring truck manufacturers to invest in and produce zero-emission trucks is a critical step toward lowering transportation emissions. Transitioning trucks from diesel engines to zero-emission motors is one of the most powerful opportunities for New York and the country to reduce climate pollution, spark economic growth, and improve equity and public health.

New York has joined other states including New Jersey, Oregon and Connecticut, in introducing the rule. But to date no state other than California has adopted the ACT.

Join Environmental Defense Fund for a conversation with leaders from the business and nonprofit sectors as they discuss the importance of the ACT to accelerating the deployment of zero-emission trucks, as well as New York's opportunity to adopt the ACT and help lead the Northeast and the country in the transition to electric vehicles.

21 September

3:30pm – 4:30pm EST

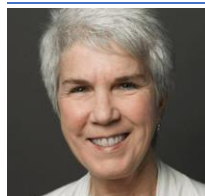

12:30pm – 1:30pm PST
