

# PROFILE OF CLEAN ENERGY INVESTMENT POTENTIAL LAS VIRGENES MALIBU

# LAS VIRGENES MALIBU: PROFILE OF CLEAN ENERGY INVESTMENT POTENTIAL

## INTRODUCTION AND OBJECTIVES

The Environmental Defense Fund commissioned the UCLA Luskin Center for Innovation to profile the potential for clean energy investments in state senatorial districts and sub-regions across Los Angeles County. Each profile is designed to help the legislators and other community stakeholders identify areas of high potential for solar energy and energy efficiency improvements in and on local buildings. The profiles also underscore the benefits of green economic investment. These benefits include capitalizing on incoming state and local funding while creating jobs and community resilience to current environmental health threats that climate change will exacerbate.

## IMPORTANCE OF PROPOSED PROJECT

This project is timely because of new state funding opportunities that could benefit Las Virgenes Malibu. The maps identify disadvantaged communities that will be prioritized for funding from cap-and-trade auction proceeds per SB 535 (de León), implementing legislation of AB 32 (Pavley), the California Global Warming Solutions Act. In addition, Proposition 39 will result in \$2.5 billion to improve energy efficiency and expand clean energy generation. The maps highlight likely recipients of Proposition 39 funding, specifically schools. Legislators and the Governor are responsible for determining specific allocations of these funds.

## ENVIRONMENTAL DEFENSE FUND:

Environmental Defense Fund's mission is to preserve the natural systems on which all life depends. Guided by science and economics, we find practical and lasting solutions to the most serious environmental problems. This has drawn us to areas that span the biosphere: climate, oceans, ecosystems and health. Since these topics are intertwined, our solutions take a multidisciplinary approach.

## UCLA LUSKIN CENTER FOR INNOVATION:

Established with a gift from Meyer and Renee Luskin, the UCLA Luskin Center for Innovation translates world-class research into real-world policy and planning solutions. Organized around initiatives, the Luskin Center addresses pressing issues of energy, transportation and sustainability. The Luskin Center is based in the UCLA Luskin School of Public Affairs.

The following people from UCLA worked on this project:

Principal investigator: J.R. DeShazo

Project manager: Colleen Callahan

GIS analyst: Norman Wong

Design: Susan Woodward

## ACKNOWLEDGEMENTS

The aforementioned authors would like to thank the Environmental Defense Fund for their support of this project, including Derek Walker, vice president, and Lauren Faber, political director. Special appreciation goes to Jorge Madrid, Emily Reyes, and Loni Russell for their vision, thoughtful feedback, and all around help during the entire project.

## A HOTTER REGION

**Adaptation in Los Angeles County is inevitable.**<sup>4</sup>

This map illustrates “Mid-Century Warming in the Los Angeles Region.” This is the first study to provide specific climate-change predictions for the greater Los Angeles area, with unique predictions down to the neighborhood level.<sup>1</sup>

The study looked at the years 2041–60 to predict the average temperature change by mid-century. Southern Californians should expect slightly warmer winters and springs but much warmer summers and falls, with more frequent heat waves. The map shows that climate change will cause temperatures in the Los Angeles region to rise by an average of 4-5°F by the middle of this century.<sup>2</sup>

All areas across the Los Angeles region will experience warming in the coming mid-century but an important aspect of this study is that it shows where *different* areas will experience *different* degrees of warming. According to the study, coastal areas like Santa Monica and Long Beach are likely to warm an average of 3 to 4 degrees, with other areas experiencing more warming. The study predicts a likely tripling in the number of extremely hot days in the downtown area and quadrupling the number in the valleys and at high elevations.

Adaptation to a changing climate will be inevitable in the Los Angeles region.

### HOW LAS VIRGENES MALIBU COULD ADAPT<sup>3</sup>

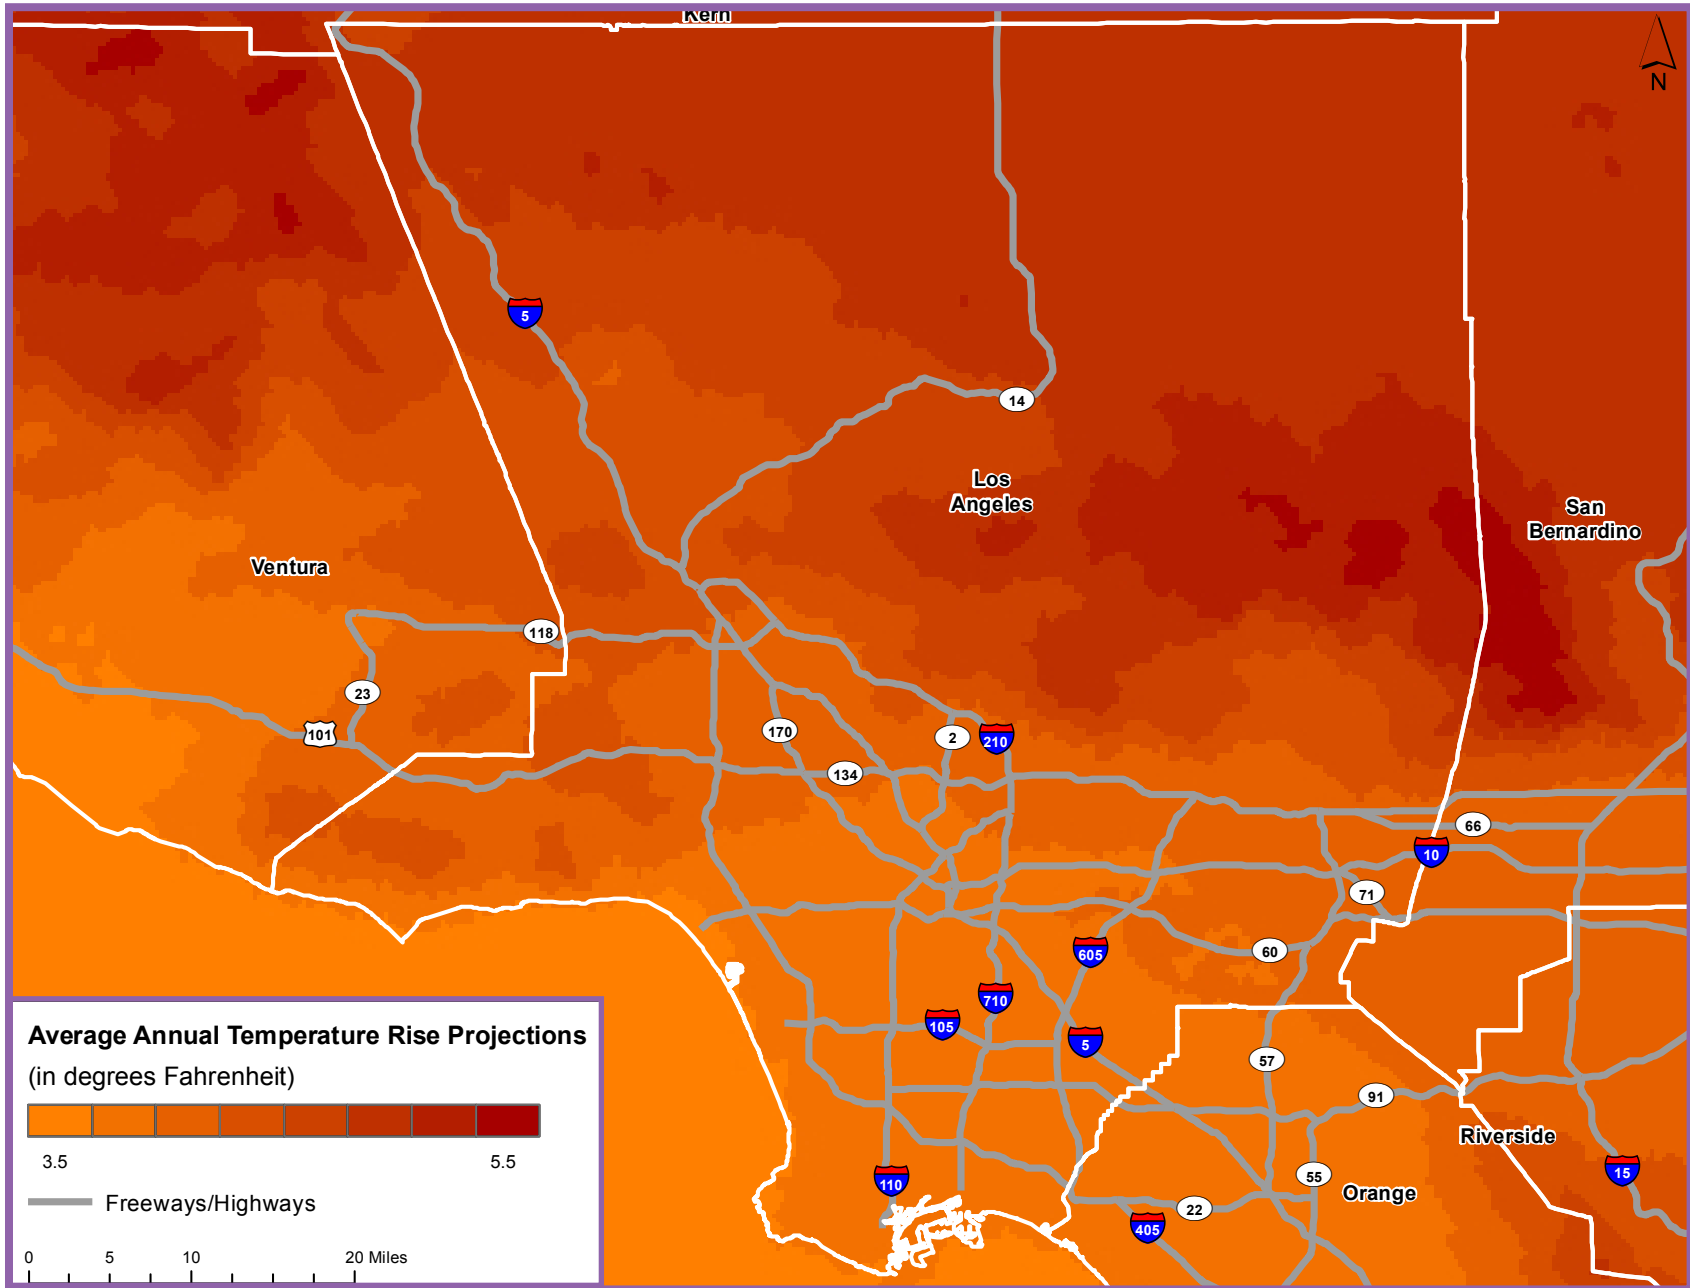

Higher temperatures will increase the importance of **energy efficient buildings**. Conservation and improved energy efficiency—with higher performing heating, ventilating and cooling systems, efficient lighting, etc.—will reduce the demand for energy, thus saving money for residents, owners and taxpayers. Producing **solar energy** on rooftops as well as retrofitting roofs to reflect sunlight (**cool roofs**), can also reduce electricity bills, while reducing emissions that contribute to climate change.

Municipal buildings can serve as **cooling centers**. This will be important because without this and other planning measures in place, hospitals will likely see an increase in patients suffering from heat stroke and heat exhaustion, as well as smog-related respiratory effects. Air quality is profoundly affected by higher temperatures because heat increases ozone smog formation. Ozone is a known lung irritant associated with asthma attacks, pneumonia and other respiratory diseases.

**Green spaces and trees** reduce the heat island effect caused by buildings and streets, and provide a place for people to cool off. Transit provides transportation access to parks, medical care and other services that can improve community resiliency to climate change.

## MID-CENTURY WARMING IN THE LA REGION

Full report at <http://c-change.la/>. See Reference page for information about the uncertainty ranges and other details.

# LAS VIRGENES MALIBU: VULNERABILITY TO CLIMATE CHANGE

The map can inform spatially-targeted strategies to reduce health risks from climate change.

Knowing what communities are vulnerable to climate change, as identified in the table below, enables policymakers to identify strategies to reduce risk and improve community resiliency. Climate change will increase health issues in many communities.

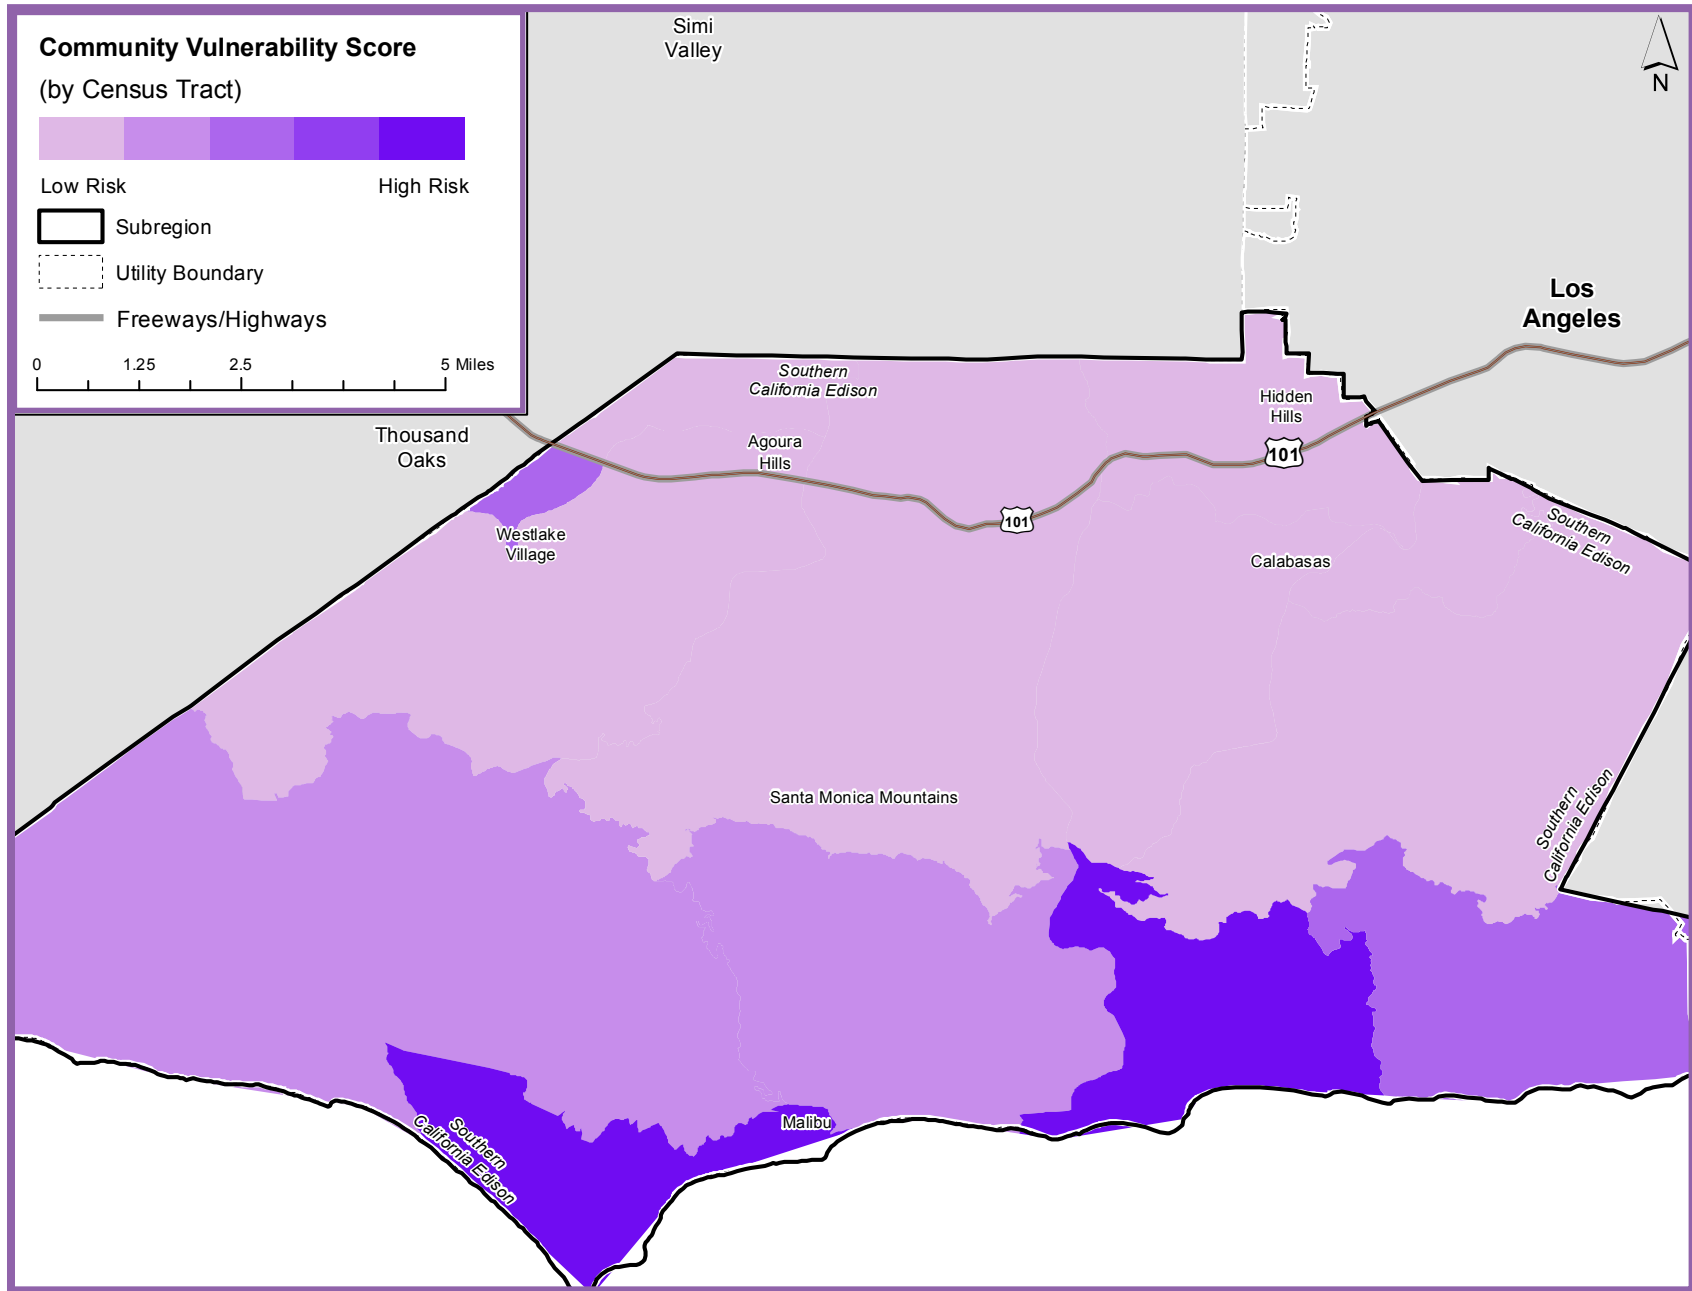

This map illustrates the extent of vulnerability to climate change in the communities (at the census tract level) of Las Virgenes Malibu. The data comes from the California Environmental Health Tracking Program (CEHTP) of the California Department of Public Health, which created an index of 7 indicators.<sup>5</sup> These indicators, of climate change impacts and a community’s adaptive capacity, included:

- Air conditioning (AC) ownership;
- Land cover characteristics (tree canopy and impervious surfaces);
- Access to transportation (transit and household car access);
- Social vulnerabilities (elderly living alone);
- Flood risk;
- Wildfire risk; and
- Sea level rise.

Note that the index does not include temperature predication data under climate change. Temperature predictions under climate change are shown in the previous map.

Community Vulnerability to Climate Change in Las Virgenes Malibu			
Zip code(s) for which the census tract (in parentheses) falls within		Level	Scores (on a scale of 1-3.778 with 3.778 being the most vulnerable)
90265 and 91302	(06037800502)	Top tier	3.000
90265 and 91302	(06037800502)	Top tier	3.000
90265	(06037800403)	Top tier	3.000
90272	(06037262602)	2nd tier	2.625
90290 and 90265	(06037800501)	3rd tier	2.500
90290 and 90265	(06037800501)	3rd tier	2.500
91302, 91364, and 91367	(06037137000)	3rd tier	2.375
91302, 91364, and 91367	(06037137000)	3rd tier	2.375
91302, 91364, and 91367	(06037137000)	3rd tier	2.375
90265 and 90263	(06037800401)	4th tier	2.250
90265 and 90263	(06037800401)	4th tier	2.250
90290, 91364 and 90272	(06037262601)	4th tier	2.111

Final report available at [www.cehtp.org/p/climate\\_population\\_vulnerabilities](http://www.cehtp.org/p/climate_population_vulnerabilities).

## LAS VIRGENES MALIBU: ENVIRONMENTAL HEALTH RISK

The map will inform the investment plan for the Greenhouse Gas Reduction Fund, with priority given to disadvantaged communities with environmental health risk.

The California Environmental Protection Agency (CalEPA) prepared the nation's first comprehensive screening tool to identify California communities that are disproportionately burdened by and vulnerable to multiple sources of pollution.<sup>6</sup> Called the California Communities Environmental Health Screening Tool (CalEnviroTool), it generates scores at the zip code level that are used in the map.

**California's greenhouse gas (GHG) cap-and-trade program** will generate revenues from credits sold to pollution emitters. These proceeds will go into the Greenhouse Gas Reduction Fund. By law, at least 25 percent of the program funding expended will be directed to projects that benefit disadvantaged communities and at least 10 percent of program funding expended will be directed to projects located in disadvantaged communities.<sup>7</sup>

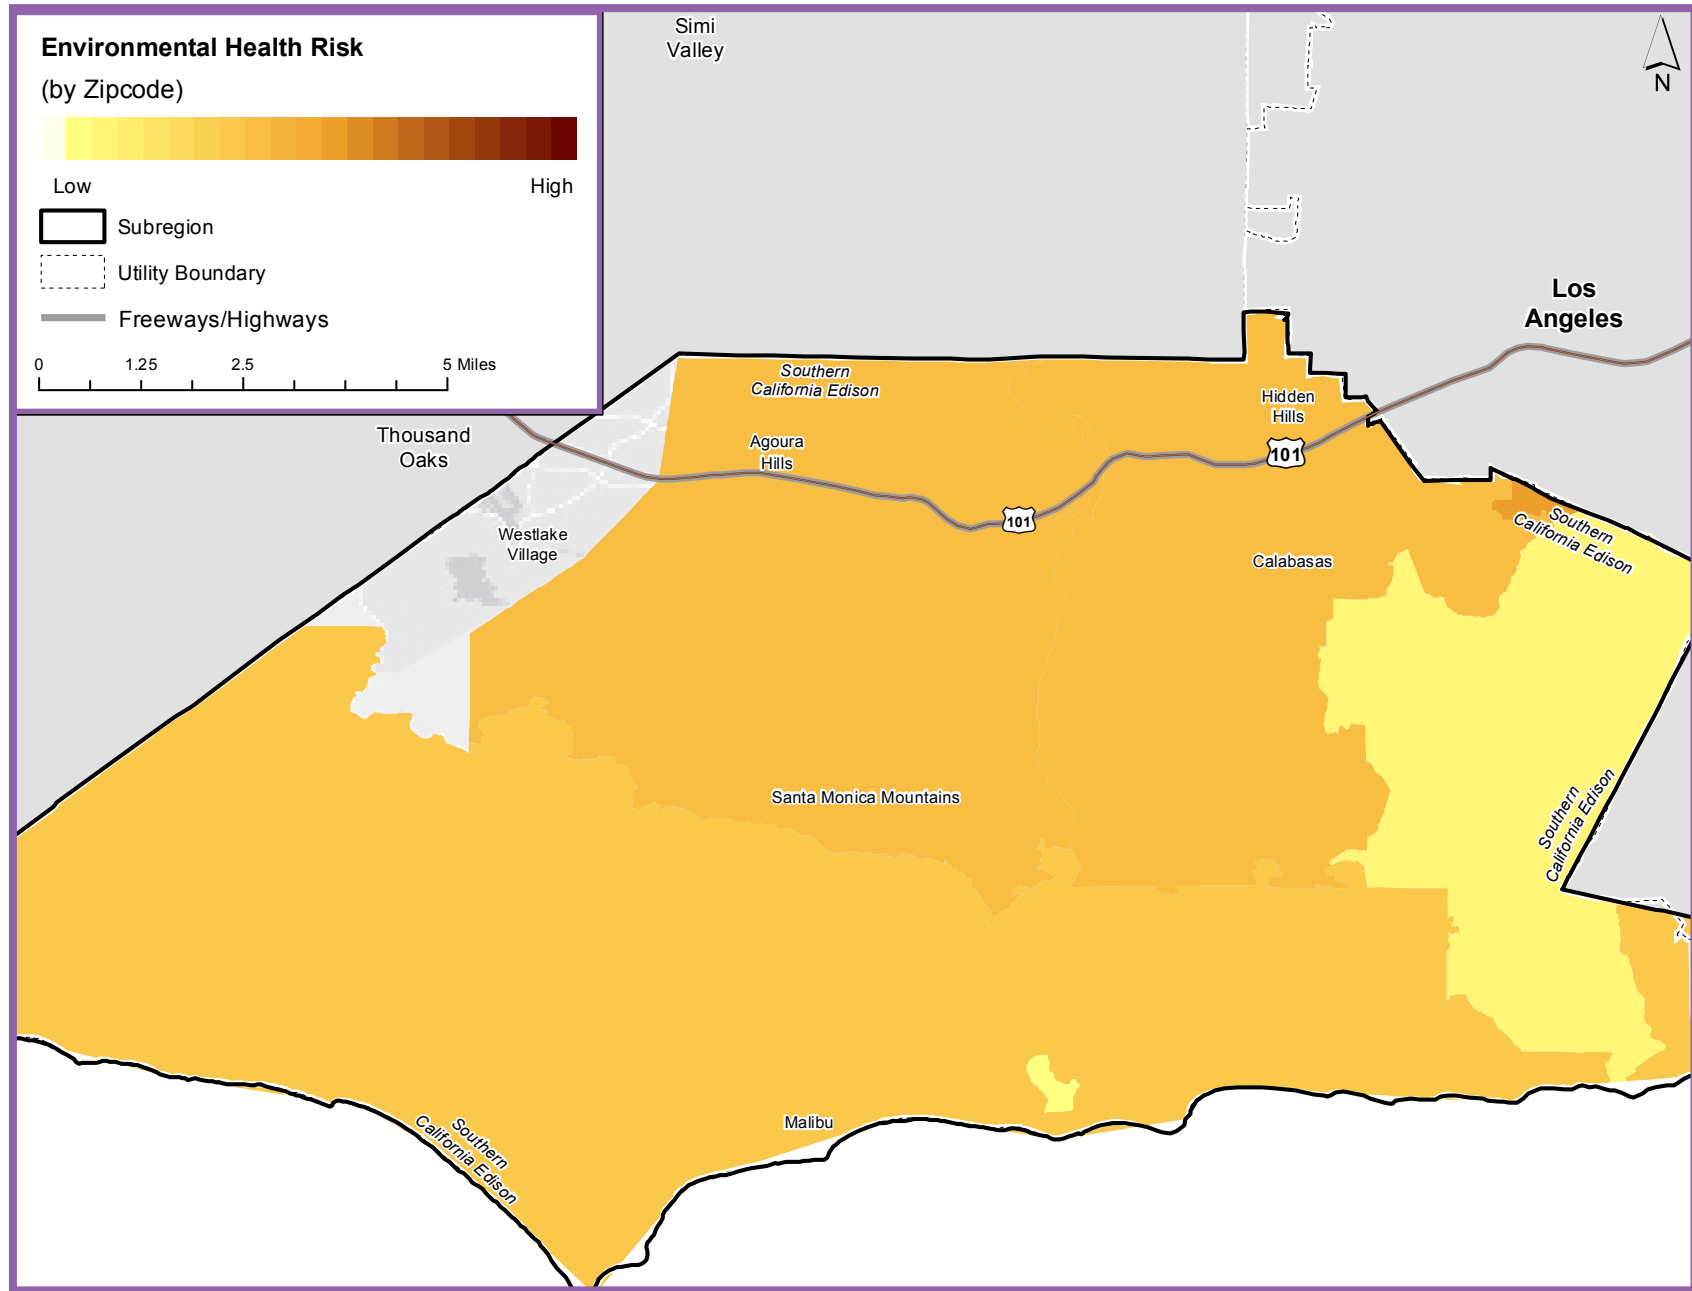

Using the CalEnviroTool, CalEPA identified the top 10 percent of the zip codes in the state as "disadvantaged communities" for the purpose of investing auction proceeds. The communities with the highest scores in the Las Virgenes Malibu area are shown in the below table and map. The tool incorporates data from 18 indicators within two categories:

- Pollution Burden, Exposure and Environmental Effect Indicators—  
Air quality/ozone, air quality/particulate matter 2.5, diesel particulate matter, pesticide use, toxic releases from facilities, traffic density, cleanup sites, groundwater threats, impaired water bodies, solid waste sites and facilities and hazardous waste facilities.
- Pollution Characteristics, Sensitive Populations and Socioeconomic Factor Indicators—  
Age/children and elderly, asthma, low birth weight infants, educational attainment, linguistic isolation, poverty and race/ethnicity.

Results from the California Communities Environmental Health Screening Tool for Las Virgenes Malibu			
Zip Code	Tier	Top 10 percent (top and second tiers) identified as disadvantaged communities for purpose of investing auction proceeds	Score
91301	13th tier	61-65%	12.25
91302	13th tier	61-65%	12.04
90265	14th tier	66-70%	10.26
90290	19th tier	91-95%	3.84
90263	Bottom tier	96-100%	2.88

*\*Highest Scores in Las Virgenes Malibu but Percentage and Tiers Compared to Other Zip Codes in California*

# LAS VIRGENES MALIBU: SOLAR CAPACITY

Las Virgenes Malibu is endowed with both bountiful sunshine and numerous buildings that offer valuable siting opportunities for solar energy generation. This map identifies the rooftop solar opportunities across neighborhoods in Las Virgenes Malibu.<sup>8</sup> Economic development planners, building owners and anyone interested in expanding solar power can use this map, along other parcel level analyses<sup>9</sup>, to identify potential investment opportunities.<sup>10</sup> Because cost-effectiveness increases with the size of a solar installation, the map statistics table presents the number of potential solar projects by size and the total rooftop potential.

**257**  
job years could be created if 5% of rooftop solar potential in Las Virgenes Malibu was realized.<sup>11</sup>

<b>MAP</b> STATISTICS	Single Family	95%	Total Rooftop Solar Potential	205 megawatts
	Multi-unit Residential	1%	Total Potential Sites	18,005 rooftops
	Commercial & Industrial	3%	Median Rooftop Availability	575 sq. ft.
	Government & Non-profit	<1%	Median Potential of Available Parcels	5.52 kilowatts

**Jobs:** If just 5% of total rooftop solar potential in Las Virgenes Malibu was realized, approximately 257 job years would be created.<sup>11</sup>

**Pollution Reduction:** This would also eliminate 10,953 metric tons of carbon dioxide pollution each year.<sup>12</sup>

## FUNDING OPPORTUNITIES

**State policies** that expand opportunities for solar include the potentially billions of dollars from Proposition 39’s Clean Energy Job Creation Fund as well as the AB 32 Greenhouse Gas Reduction Fund (cap-and-trade auction proceeds). In order for Las Virgenes Malibu to benefit, policymakers will have to be vigilant to ensure that residents, businesses and schools have access to these opportunities.

**Job training** will also be supported by Proposition 39.

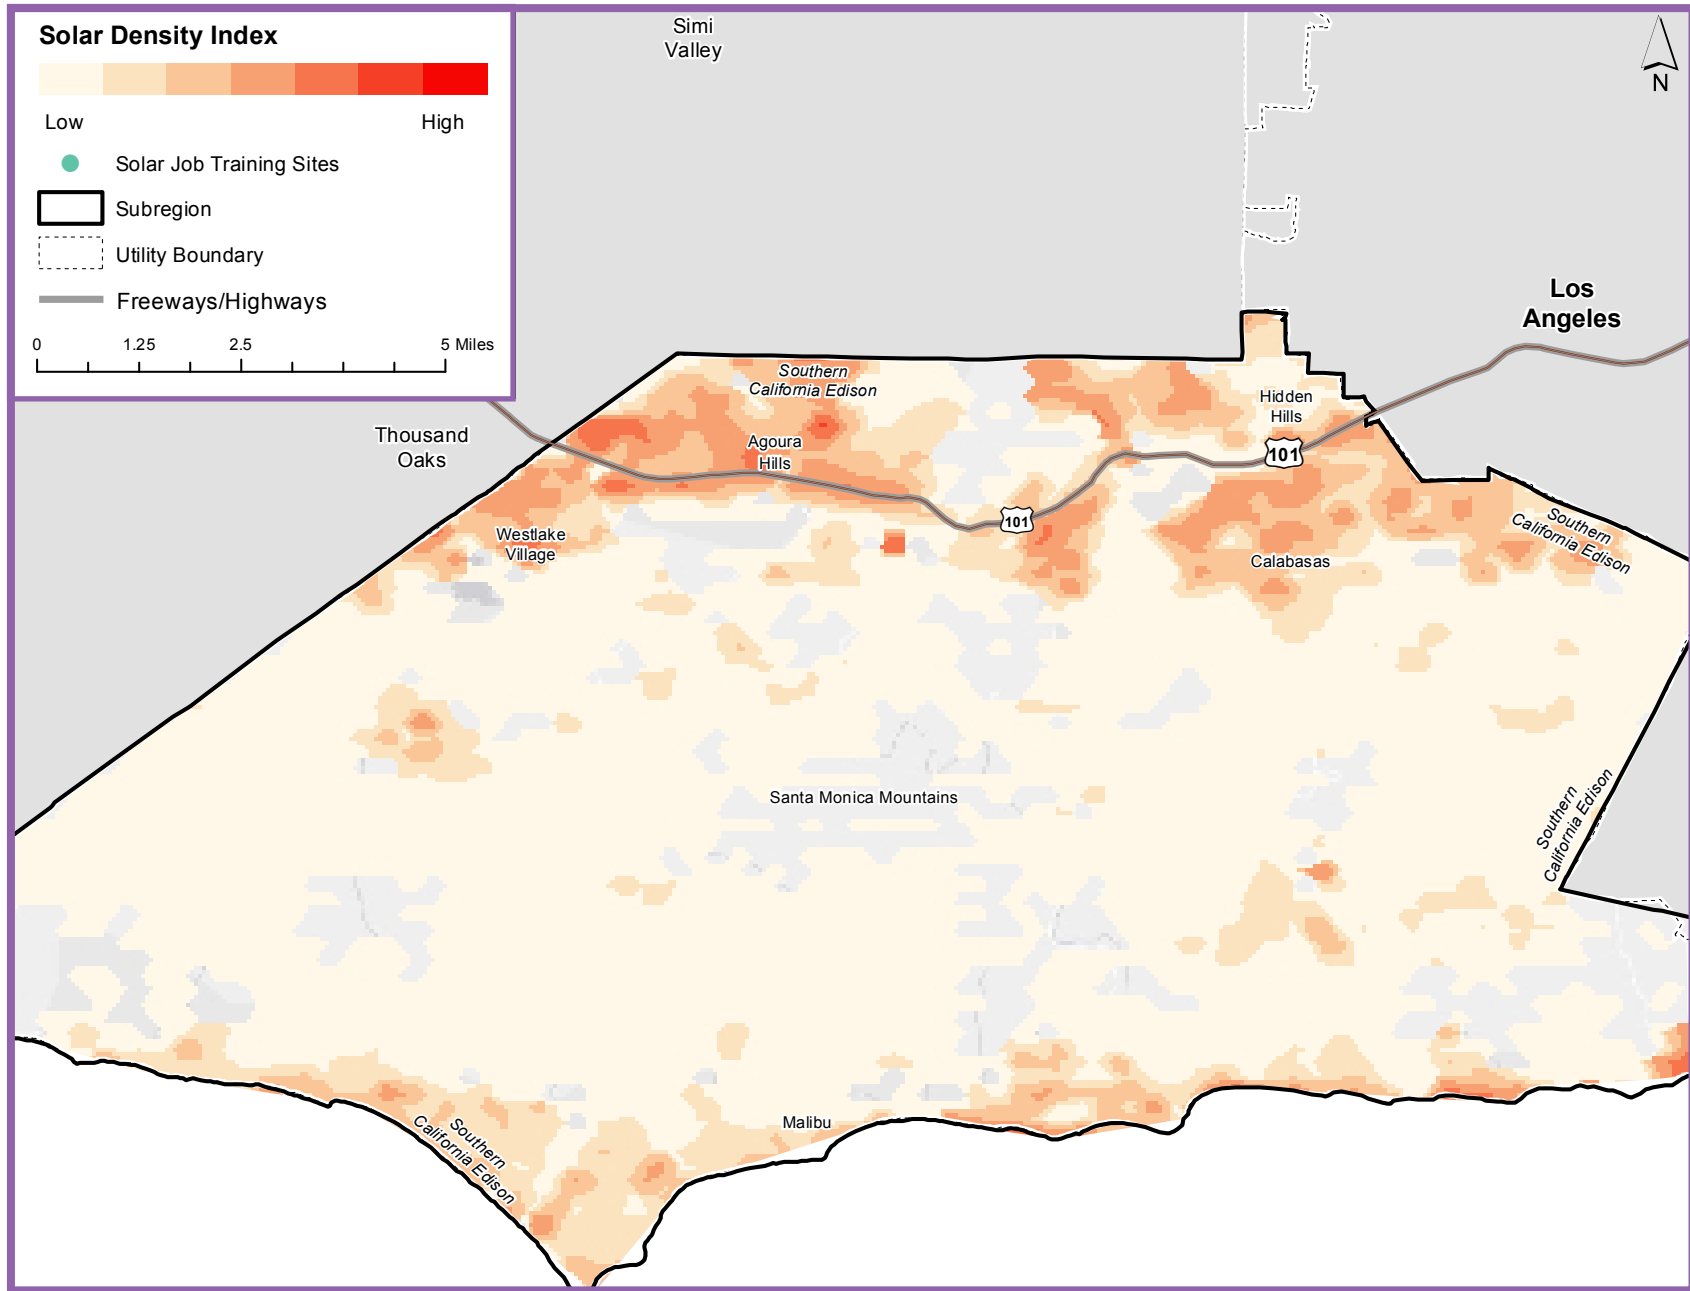

**Local policies** also provide financial incentives for solar investments. Through the California Solar Initiative, Southern California Edison offers incentives including rebates on solar equipment and installation of photovoltaics and solar heating systems. Residential and commercial customers could also be eligible for Net Energy Metering, which gives property owners credit for the electricity generated by the solar system on their rooftop.

### Parcels with the Largest Potential Solar Projects in Las Virgenes Malibu

Rank	Potential (kW)	Parcel Address	Zip Code	Parcel Use Description
1	3,277	29500 Heathercliff Rd; Malibu	90265	Mobile Home Parks
2	1,998	5308 Derry Ave; Agoura Hills	91301	Light Manufacturing
3	1,679	31303 Agoura Rd; Westlake Village	91363	Office Buildings
4	1,466	31300 Via Colinas; Westlake Village	91362	Light Manufacturing
5	1,309	2 Dole Dr; Westlake Village	91362	Hotel & Motels

# SOLAR CAPACITY

Source: Original solar capacity data: Los Angeles County, "Los Angeles County Solar Map." [solarmap.lacounty.gov](http://solarmap.lacounty.gov). Data modified by UCLA for the "Los Angeles County Solar Atlas," from which the above map was created. [innovation.luskin.ucla.edu](http://innovation.luskin.ucla.edu). Solar training sites data: USC Program for Environmental and Regional Equity, 2011. "Empowering LA's Solar Workforce." Sponsored by the Los Angeles Business Council. Original data from Environment California Research and Policy Center, 2011. "Building a Clean Energy Workforce: Preparing Californians for New Opportunities in the State's Green Economy."

# LAS VIRGENES MALIBU: ENERGY EFFICIENCY POTENTIAL: RESIDENTIAL BUILDINGS/HOMES

The map highlights neighborhoods where potential for energy efficiency investments might be greatest for residential homes.<sup>13</sup> Buildings constructed before 1978 in general produce greater cost savings when retrofitted than buildings built after 1978.<sup>14</sup> The potential for energy efficiency investments is summarized for Las Virgenes Malibu in the map statistics table.

**40%** of homes in Las Virgenes Malibu were built before the state's energy efficiency building codes.

Simple retrofits can save money and make the home more comfortable year round.

MAP  
STATISTICS

Residential Buildings in Las Virgenes Malibu		All Buildings in Las Virgenes Malibu	
# of single-family homes	17,151	# of total buildings in Las Virgenes Malibu	17,905
% built before 1978	40%	% built before 1978	40%
Average square footage of pre-1978 buildings	4,700	Average square footage of pre-1978 buildings	5,539
% built in or after 1978	60%	% built in or after 1978	60%
Average square footage of post-1978 buildings	5,350	Average square footage post-1978 buildings	6,388

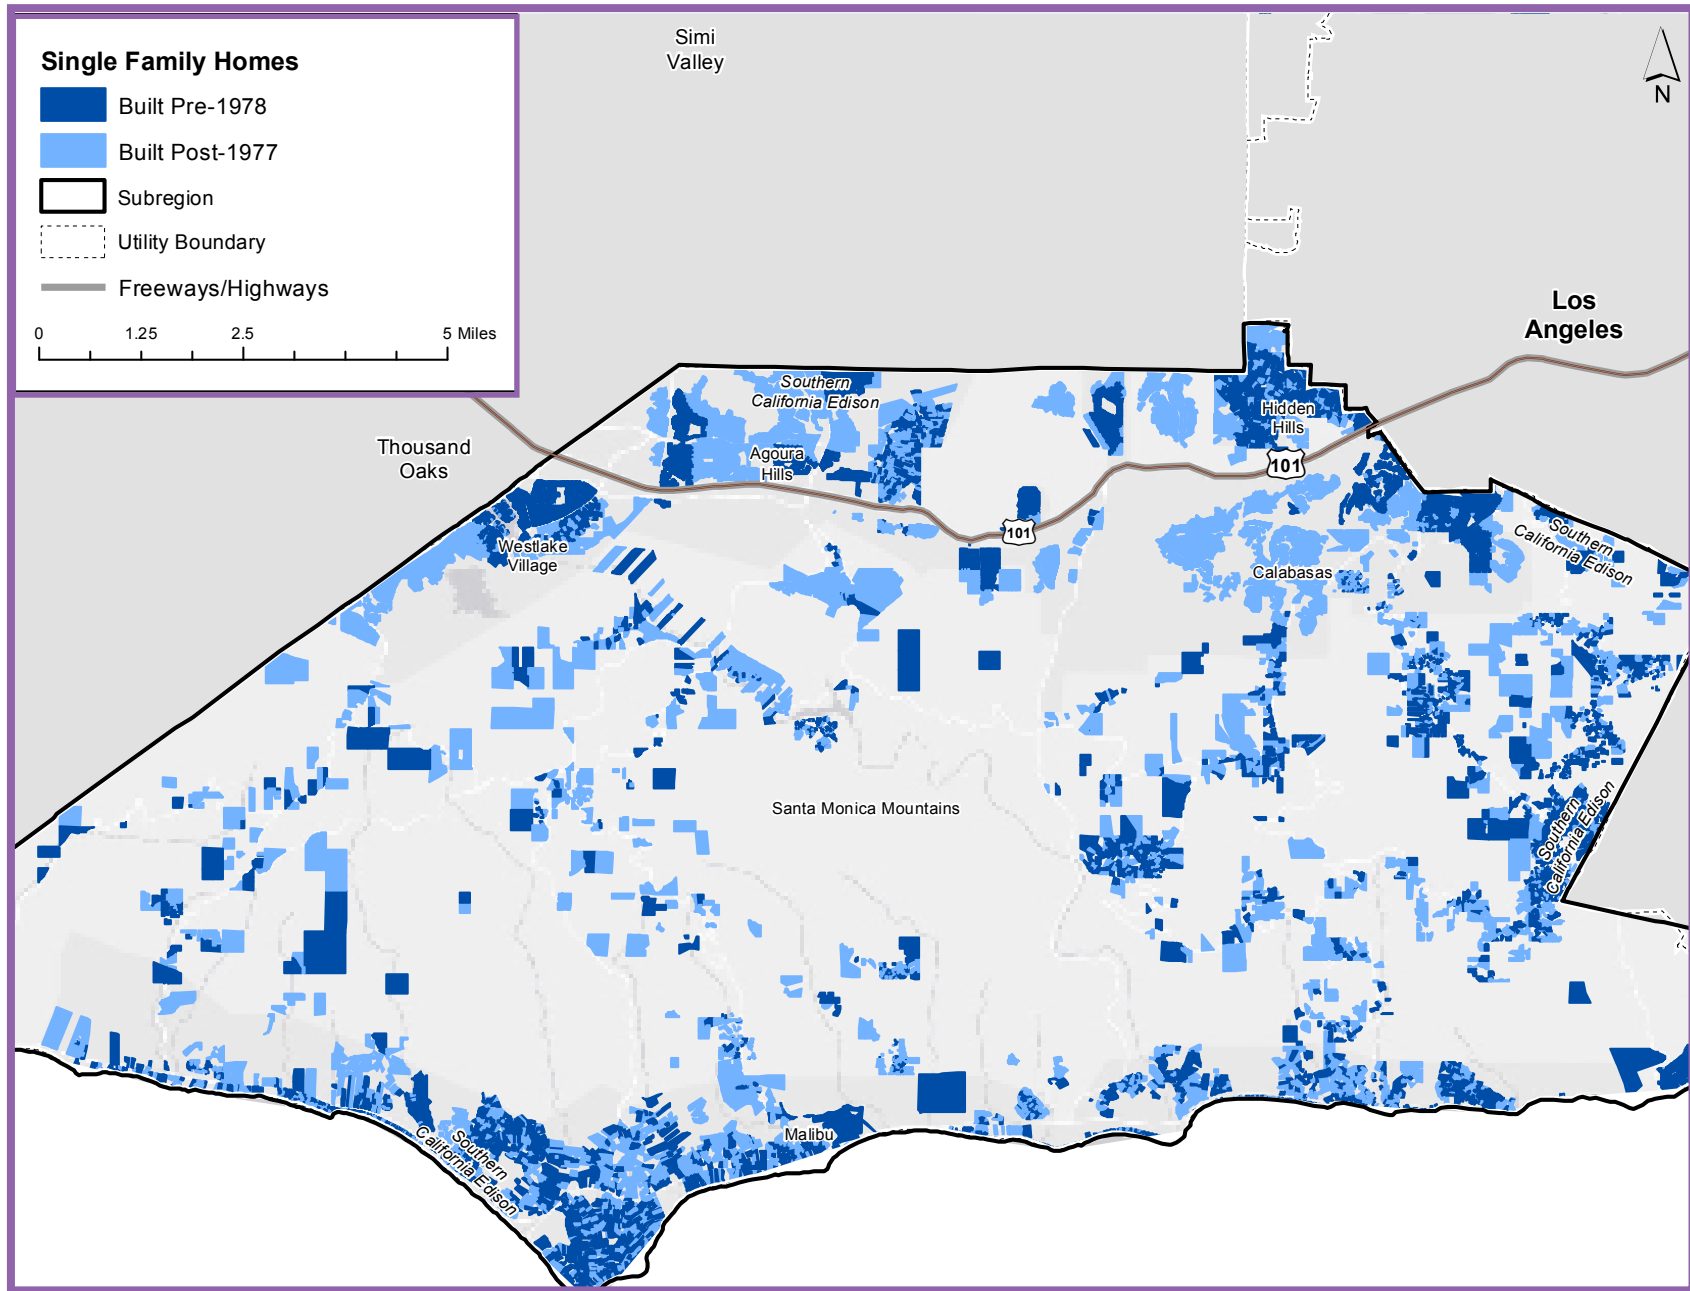

## FUNDING OPPORTUNITIES

**State policies** such as Proposition 39 will distribute billions of dollars to support energy efficiency improvements. Las Virgenes Malibu could benefit from state funds for rebates, grants and loans to finance energy efficiency investments, which would help taxpayers save money on electricity bills, support local green jobs and reduce pollution.

**Local policies** provide financial incentives to homeowners for energy efficiency investments. Through Energy Upgrade California™, incentives of up to \$4,500 are available to residential customers of Southern California Edison (SCE) and the Southern California Gas Company (SoCal Gas). Other programs include:

- Residential Energy Efficiency Rebate Program—  
SCE provides residential incentives for a wide range of energy efficiency upgrades, including up to \$1,100 to help with A/C installation, maintenance and repair as well as refrigerator recycling, ENERGY STAR™ refrigerator rebates, pool pump and motor rebates, the More Light for Less program, whole house fan rebates, evaporative cooler rebates, water heater rebates and clothes washer rebates.
- Home Energy Efficiency Rebate Program—  
SoCal Gas provides rebates to residential customers for energy efficiency upgrades with ENERGY STAR™ equipment.
- California Advanced Homes Incentives—  
Incentives for home construction that performs at least 15% better than Title 24 Standards.

# ENERGY EFFICIENCY POTENTIAL: RESIDENTIAL

Source: 2009 Assessors/Solar Potential Data: UCLA modified from County of Los Angeles eGIS, specifically from Mark Greninger.

# LAS VIRGENES MALIBU: ENERGY EFFICIENCY POTENTIAL: MULTI-UNIT RESIDENTIAL BUILDINGS

The map highlights neighborhoods where potential for energy efficiency investments might be greatest for multi-unit residential buildings.<sup>13</sup> Buildings constructed before 1978 in general produce greater cost savings with building retrofits than buildings built after 1978,<sup>14</sup> as illustrated in the map. The potential for energy efficiency investments is summarized for Las Virgenes Malibu in the map statistics table.

**85%** of apartments and other multi-unit residential buildings in Las Virgenes Malibu were built before the state's energy efficiency building codes.

The cheapest energy is the energy not used in the first place.

		Multi-unit Residential Buildings in Las Virgenes Malibu	All Buildings in Las Virgenes Malibu	
MAP STATISTICS	# of multi-unit residential buildings	224	# of total buildings in Las Virgenes Malibu	17,905
	% built before 1978	85%	% built before 1978	40%
	Average square footage of pre-1978 buildings	10,853	Average square footage of pre-1978 buildings	5,539
	% built in or after 1978	15%	% built in or after 1978	60%
	Average square footage of post-1978 buildings	59,161	Average square footage post-1978 buildings	6,388

## FUNDING OPPORTUNITIES

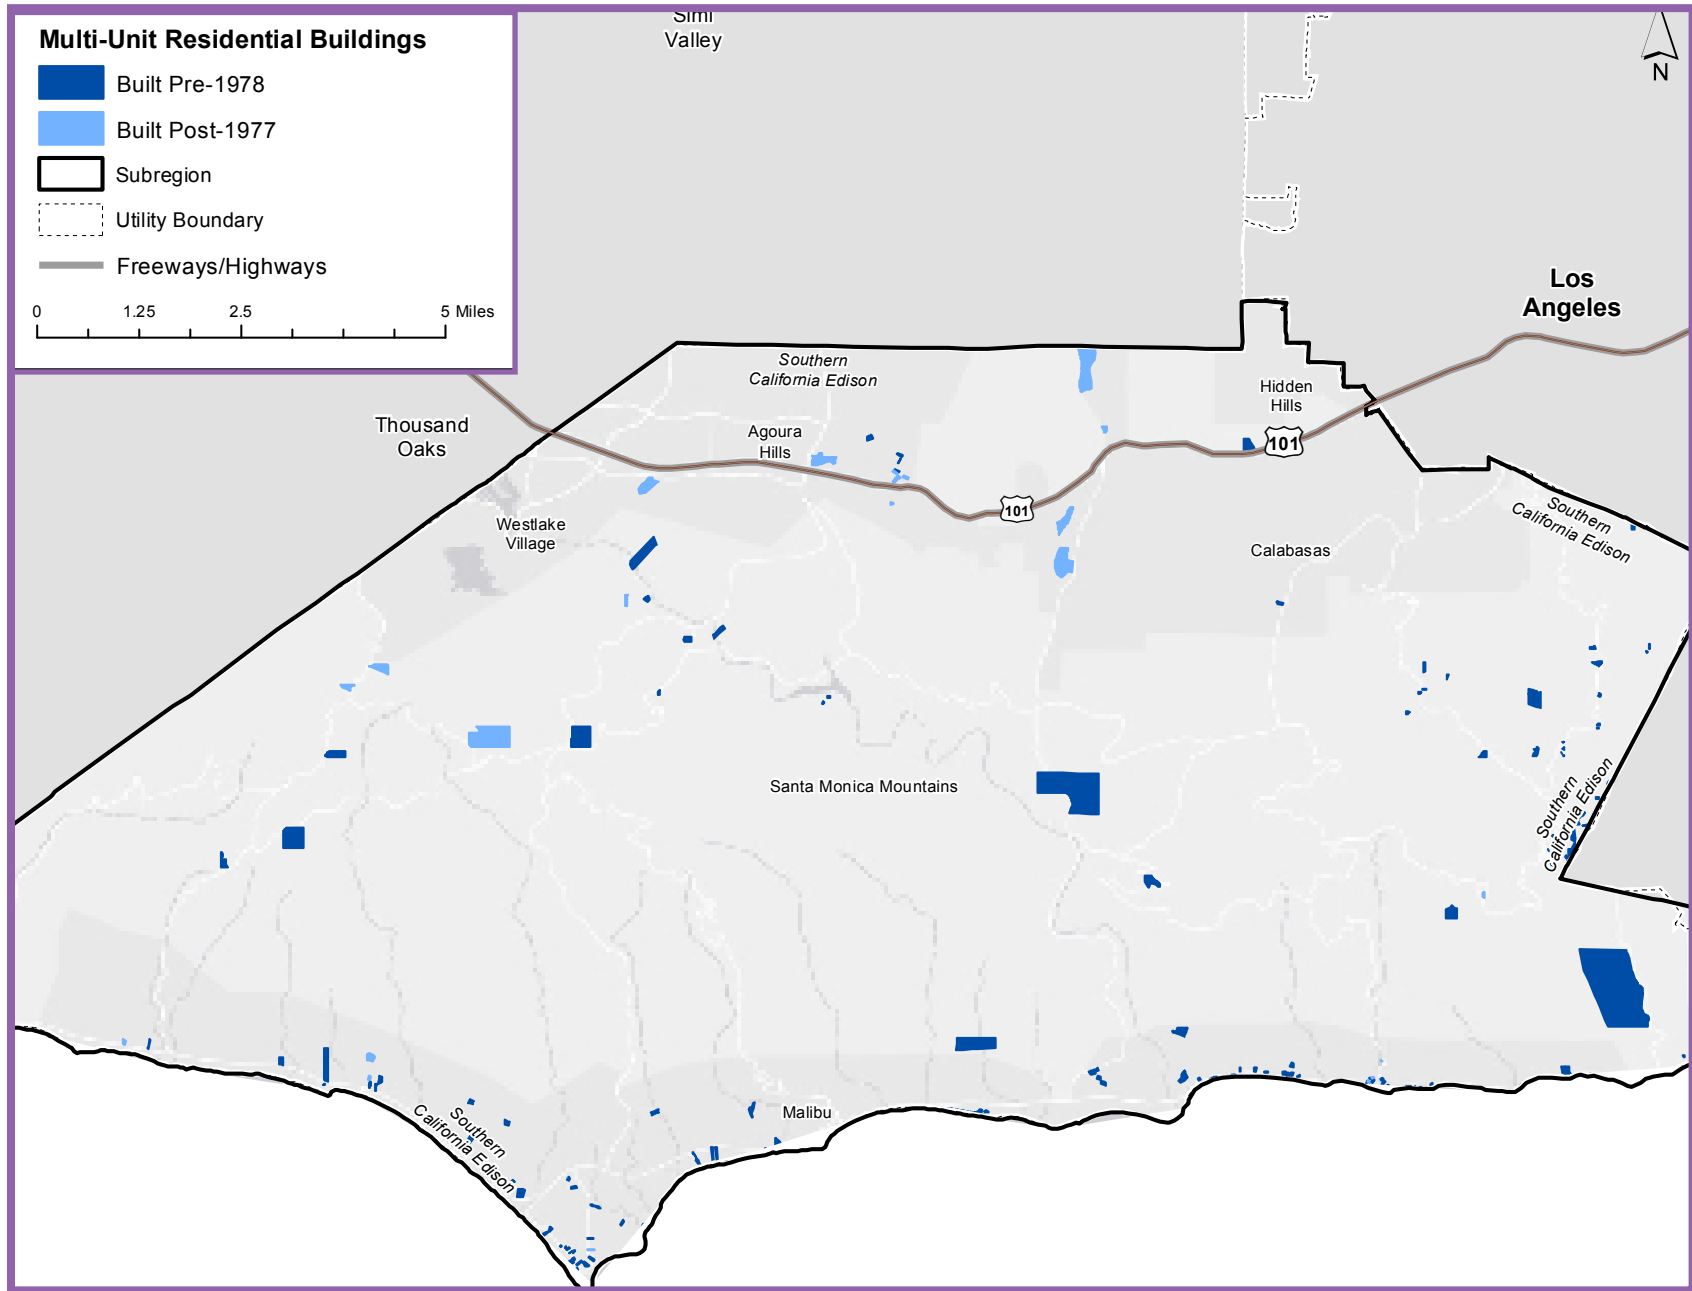

**State policies** such as Proposition 39 will distribute billions of dollars to support energy efficiency improvements. Las Virgenes Malibu could benefit from state funds for rebates, grants and loans to finance energy efficiency investments, which would help consumers and property owners save money on their electricity bills, support local green jobs and reduce pollution.

**Local policies** also provide financial incentives for energy efficiency investments in multi-unit residential buildings. The previous narrative page describes residential incentive programs offered by Southern California Edison (SCE) and the Southern California Gas Company (SoCalGas).

In addition, SCE offers a multi-family residential energy program that provides rebates to property managers and owners of multi-unit residences for energy efficiency upgrades.

SoCalGas also offers a multi-family residential energy program that provides rebates for energy efficiency upgrades to property managers and owners of multi-unit residences.

# ENERGY EFFICIENCY POTENTIAL: MULTI-UNIT RESIDENTIAL

Source: 2009 Assessors/Solar Potential Data: UCLA modified from County of Los Angeles eGIS, specifically from Mark Greninger.

# LAS VIRGENES MALIBU: ENERGY EFFICIENCY POTENTIAL: COMMERCIAL AND INDUSTRIAL BUILDINGS

The map highlights neighborhoods where potential for energy efficiency investments might be greatest for commercial and industrial buildings.<sup>13</sup> Buildings constructed before 1978 in general produce greater cost savings with building retrofits than buildings built after 1978,<sup>14</sup> as illustrated in the map. The potential for energy efficiency investments is summarized for Las Virgenes Malibu in the statistics table, below.

**30%**  
on average of  
the energy used  
in commercial  
buildings is wasted,  
according to the  
U.S. Environmental  
Protection Agency.

**Retrofitting  
buildings to be  
energy efficient  
saves money and  
creates jobs.**

MAP  
STATISTICS

	Commercial and Industrial Buildings in Las Virgenes Malibu		All Buildings in Las Virgenes Malibu

% built before 1978	35%	% built before 1978	40%	
Average square footage of pre-1978 buildings	22,296	Average square footage of pre-1978 buildings	5,539	
% built in or after 1978	65%	% built in or after 1978	60%	
Average square footage of post-1978 buildings	33,984	Average square footage post-1978 buildings	6,388	

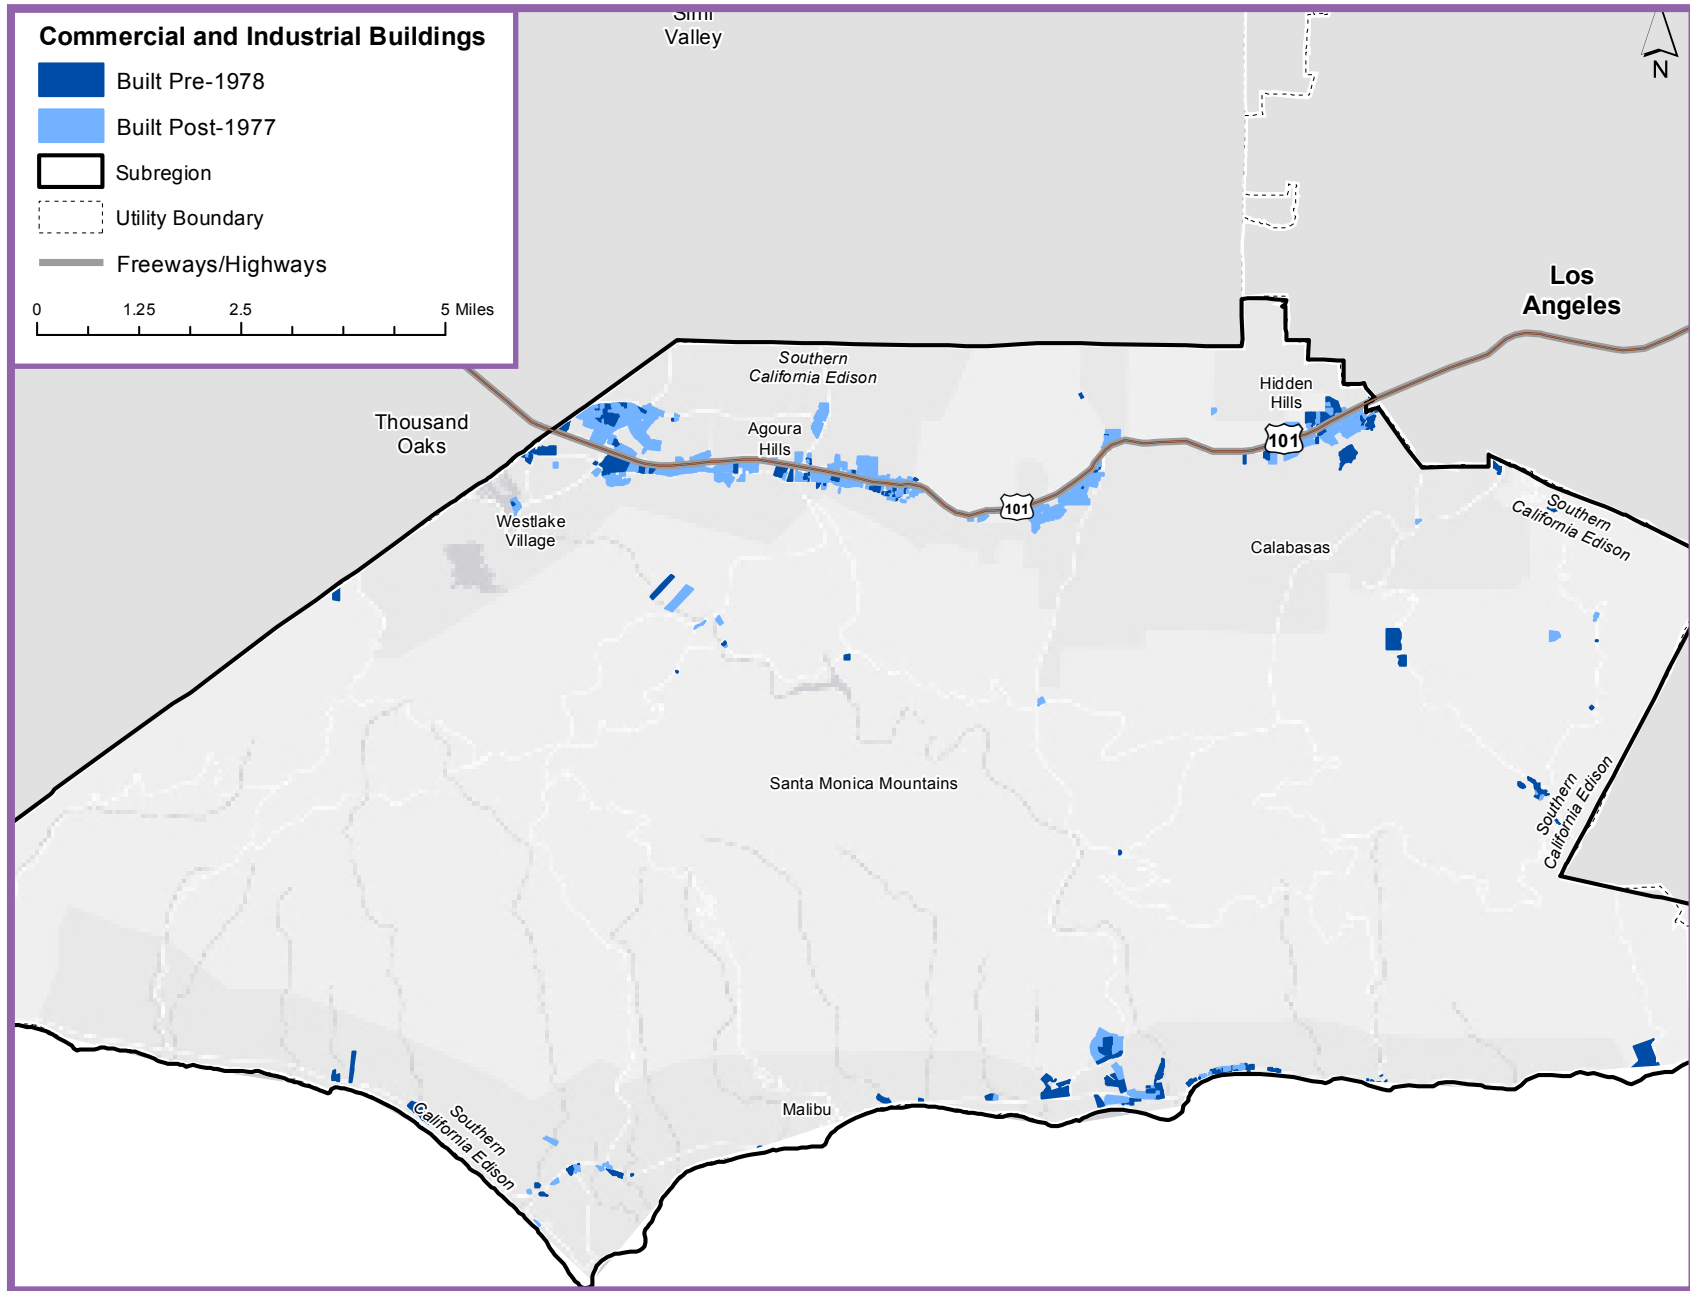

## FUNDING OPPORTUNITIES

**State policies** such as Proposition 39 will distribute billions of dollars to support energy efficiency improvements. Las Virgenes Malibu could benefit from state funds for rebates, grants and loans to finance energy efficiency investments, which would help businesses save money on their electricity bills, support local green jobs and reduce pollution.

**Local policies** also provide financial incentives for energy efficiency investments. Southern California Edison (SCE) offers a range of programs for industrial and commercial customers, including:

- **Demand Response Program**—  
Helps commercial customers save money by reducing energy use during peak demand times.
- **Energy Efficiency Express Solutions**—  
Provides rebates paid up to 100% on energy upgrades for lighting, temperature control, refrigerators and water heaters.
- **Savings by Design Program**—  
SCE partners with the Southern California Gas Company (SoCal Gas) on the Savings by Design program that provides technical expertise and rebates to commercial and industrial customers to reduce energy usage.
- Other SCE and SoCal Gas services include energy efficiency customized solutions, an energy efficiency calculated incentive program, and a non-residential on-bill financing program.

# ENERGY EFFICIENCY POTENTIAL: COMMERCIAL AND INDUSTRIAL

Source: 2009 Assessors/Solar Potential Data: UCLA modified from County of Los Angeles eGIS, specifically from Mark Greninger.

# LAS VIRGENES MALIBU: ENERGY EFFICIENCY POTENTIAL: GOVERNMENT AND NON-PROFIT BUILDINGS

The map highlights neighborhoods where potential for energy efficiency investments might be greatest for government and non-profit owned buildings.<sup>13</sup> Buildings constructed before 1978 in general produce greater cost savings with building retrofits than buildings built after 1978,<sup>14</sup> as illustrated in the map. The potential for energy efficiency investments is summarized for Las Virgenes Malibu in the statistics table, below.

**Billions  
of \$**  
are on the table  
for energy  
efficiency and  
clean energy  
investments in  
California.

MAP  
STATISTICS

Government and Non-profit Buildings in Las Virgenes Malibu		All Buildings in Las Virgenes Malibu	
# of government and non-profit buildings	52	# of total buildings in Las Virgenes Malibu	17,905
% built before 1978	63%	% built before 1978	40%
Average square footage of pre-1978 buildings	61,183	Average square footage of pre-1978 buildings	5,539
% built in or after 1978	37%	% built in or after 1978	60%
Average square footage of post-1978 buildings	30,424	Average square footage post-1978 buildings	6,388

## FUNDING OPPORTUNITIES

**State policies** such as Proposition 39 will distribute billions of dollars to support energy efficiency improvements. Las Virgenes Malibu could benefit from state funds for rebates, grants and loans to finance energy efficiency investments, which would save taxpayers' money while supporting local green jobs and reducing pollution.

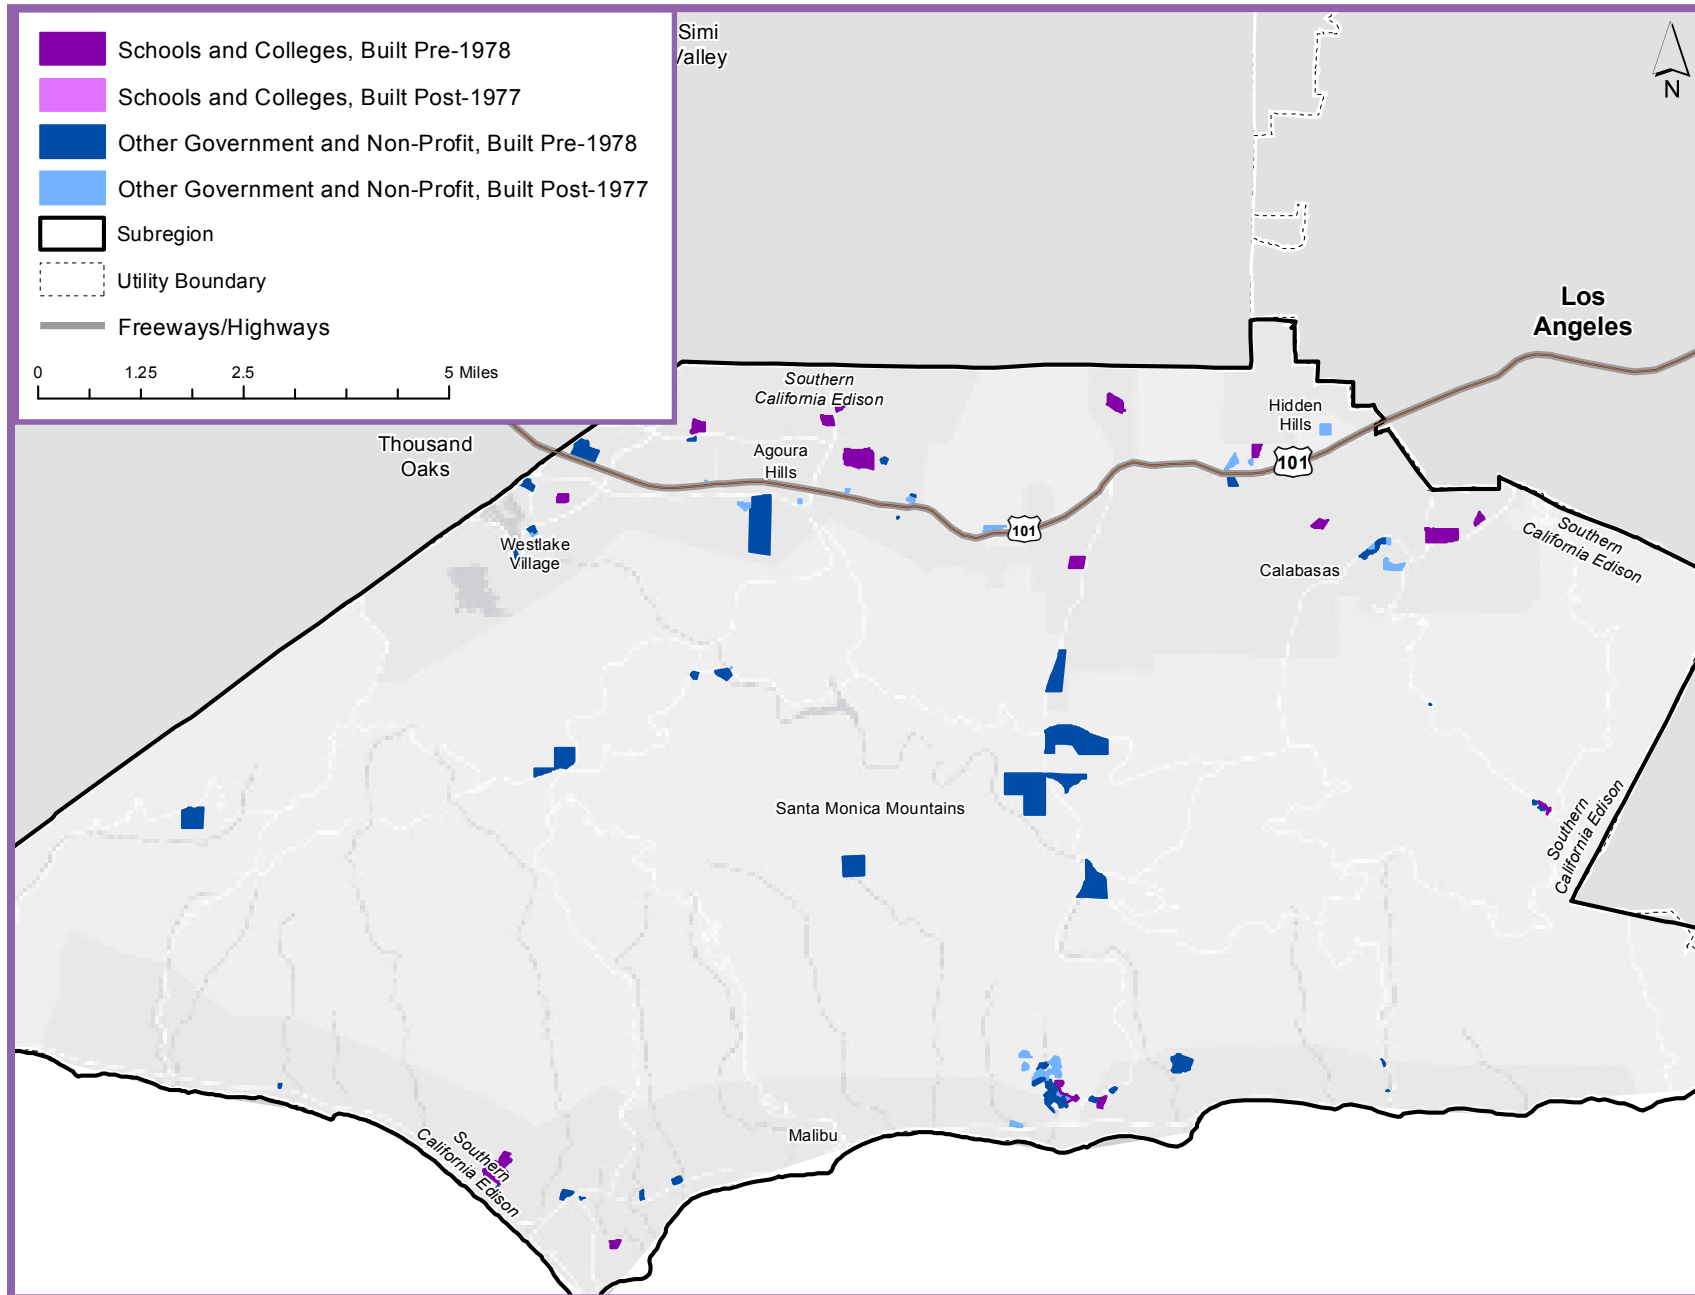

**Municipal buildings** will be eligible recipients for Proposition 39 funds. The map identifies the municipal buildings constructed before 1978, an indication of likely cost effectiveness for a retrofit.

**Schools** are pulled out because schools will be prime recipients of Proposition 39 funds. As the map indicates, numerous schools were constructed pre-1978, before energy efficiency building codes were in effect.

**Green job training sites** will also be supported by Proposition 39 funds. The map identifies green buildings training sites that could be eligible for these funds.

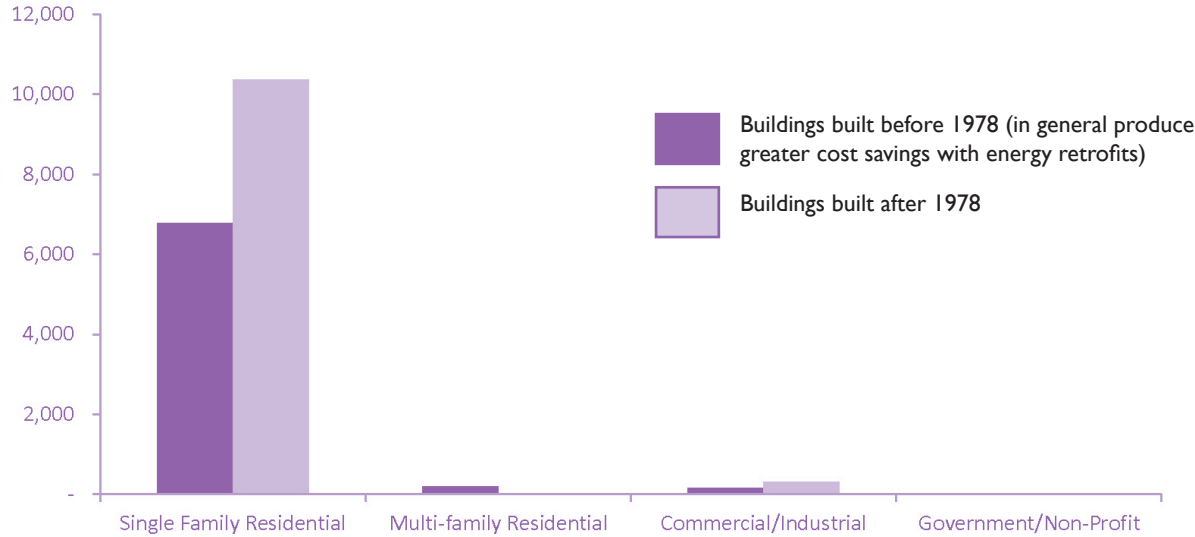

# ENERGY EFFICIENCY POTENTIAL: GOVERNMENT AND NON-PROFIT

# LAS VIRGENES MALIBU: ENERGY EFFICIENCY POTENTIAL SUMMARY

## NUMBER OF BUILDINGS BY SECTOR

## ALL BUILDINGS IN LAS VIRGENES MALIBU

## LINKING INVESTMENTS IN WORKFORCE TRAINING TO SUSTAINABLE JOBS

“Sustainable jobs” pay prevailing wages and provide healthcare and access to opportunities for wage growth.<sup>15</sup> To effectively link Proposition 39’s funding for worker training with sustainable jobs, policymakers should consider best practices for a strong pipeline between training programs and careers. For example, the Los Angeles Community College District and the City of Los Angeles have approved project labor/stabilization agreements, or contracts with labor unions, that include goals for local hires and apprentices workers. Apprenticeship programs can create a strong pipeline between education and sustainable jobs and careers.

## THE TRUTH ABOUT JOB CREATION

Energy efficiency investments create costs savings for the customer and jobs for the region. Invest \$1 million in the following industries, you get this many jobs.<sup>16</sup>

Produced by UCLA with funding and support from the City of Los Angeles, in partnership with the Los Angeles Regional Collaborative for Climate Action and Sustainability (LARC). <http://c-change.la/>
2. There is a 95% confidence that the warming will be between 1.7 and 7.5°F. To account for uncertainty associated with the trajectory of future greenhouse gas emissions and other factors affecting the planet’s energy balance, the researchers inputted projections for both the standard “business-as-usual “ (RCP8.5) and “mitigation” (RCP2.6) emission scenarios. In the map we illustrate the average annual temperate increases modeled under the business-as-usual scenario. Yet the study found that even the best case scenario will lead to significant warming due to emissions that are already moving through the Earth’s atmosphere.
